DETAILED ACTION

Response to Arguments

1. Applicant's arguments have been fully considered and are persuasive.

Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of **Fujikawa US patent 4,798,082**.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claim 1,2,4-6,8,9,19,21-24,27 and 28 are rejected under 35 U.S.C. 102(b) as being anticipat4ed by **Fujikawa US patent 4,798,082.**

Fujikawa'082 discloses a stand-alone detachable load monitoring module and method for use with a generator (Fig.2 and 3), wherein the generator is adapted to supply power to a load, the apparatus comprising: a sensor adapted to sense a signal supplied to the load (column 5, lines 55-65) and a humanly perceptible indicator (46, remount control display device) having a plug (51,52,53,54 Fig.4) adapted to be inserted into a power receptacle, and to output at least one discontinuous humanly perceptible indication of the sensed signal supplied to the load (device 46 senses and displays values of ,voltage, amp, frequency, oil, fuel and overload) and a LCD (14),a frequency sensor (Fig. 4), the power receptacle is positioned at the generator (51,54 Fig. 4).

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 7 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Fujikawa US patent 4,798,082** and in view of skill in the art.

Fujikawa'082 teaches all limitation of the claimed invention except for a signal sensor to sense a frequency higher than 56.5 or 58.5 Hz, to control the rotating speed of generator.

- 6. With regards to claims 7 and 26,It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a signal sensor to sense a frequency higher than 56.5 or 58.5 Hz, to control the rotating speed of generator, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Iraj A Mohandesi whose telephone number is 571-272-2028. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Darren Schuberg can be reached on 571-272-2044. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
